

DPF NEWSLETTER

APRIL 2008

The future is here!

2009 will be the Year of Data in Particle Physics:

The LHC comes on line this summer; mature accelerator programs will continue to produce a flood of precision results from Fermilab and SLAC; numerous astro-particle experiments will be reporting increasingly impressive results; and planning will continue toward potential future facilities such as ILC, DUSEL, and Project X. Given this broad landscape, it is fitting that there are two DPF meetings during 2009.

APS April Meeting 2009
May 2-5, 2009

The 2009 April Meeting will be (in May!) in Denver, Colorado and the center of attention will be on High Energy Physics and early LHC running. The April Meeting announcement will be in October and will include the first call for abstracts. Invited session plans are due by early November, so ideas and requests should be forwarded to the April Meeting Co-Chair, Bob Cahn or the DPF Meeting Chair, Chip Brock by mid-summer. A conference web site will be announced soon.

Meeting of the Division of Particles & Fields
July 26-31, 2009

The 2009 DPF meeting will be held July 26-31 at Wayne State University in Detroit, Michigan and will highlight the first results from the Large Hadron Collider. The venue at Wayne State will feature accommodations in the new "Tower" residence halls as well as downtown hotels. Conference participants and guests can enjoy an excursion to the Ford Rouge automobile plant, historic Greenfield Village and the Henry Ford museum. Preliminary plans are for the conference dinner to be held at the beautiful Detroit Yacht Club on Belle Isle. A conference web site will be announced soon.
